## BBSQ Foreword

This national standard is identical with the English version of International Standard ISO 17043:2010, **Conformity assessment — General requirements for proficiency testing**. The national committee responsible for reviewing this standard is Technical Committee 13 *Conformity Assessment*. This standard contains requirements that are relevant for The Bahamas.

## BBSQ Committee Representation

This ISO International Standard was adopted as a National Standard under the supervision of the National Technical Committee for Conformity Assessment (NTC 13) hosted by the Bahamas Bureau of Standards and Quality which at the time comprised the following members:

Member	Representing
Dr. Ismae Whyms ( <b>Chairperson</b> )	Princess Margaret Hospital
Mr. Raymond Baillou ( <b>Vice Chairman</b> )	QALS Partners
Mr. Lindy Hall ( <b>Technical Secretary</b> )	Ministry of Works
Mr. Nathaniel E. Lloyd ( <b>Technical Secretary</b> )	Royal Bahamas Police Force Forensic Lab Biology Unit
Ms. Bria Dean ( <b>Recording Secretary</b> )	Antiquities and Museums Corporation
Ms. Patrice Nairn ( <b>Recording Secretary</b> )	Premier Clinical Lab
Mr. Brian B. Beneby	Water & Sewerage Corporation
Ms. Sybil Bullard	BAMT
Ms. Margaret Daxon	Diabetes Education on the Move
Ms. Deborah Deal	BCCEC
Ms. Bernadette Ellis	Health Professions Council
Dr. M. Anthony C. Frankson	University of the West Indies School of Clinical Medicine and Research Bahamas
Ms. Alexandra Hall	Higgs & Johnson
Dr. Raveenia Hanna	Bahamas Agriculture and Marine Science Institute

Dr. M. Isaacs	Department of Agriculture
Ms. Renee Johnson	Bahamian Touch Products
Ms. Tyrhonda Knowles	Department of Information Technology
Mr. Andre A. Moss	Sun Oil Engineering – Projects
Dr. Patrizia Pasini	N/A
Mrs. Erika Perpall	Department of Information Technology
Ms. Kendra Pratt	Department of Information Technology
Mr. Olsen J. Smith	Water & Sewerage Corporation
Ms. Jaime Strachan	Registrar General's Office
Ms. Avis Richardson	Food Technology and Safety Laboratory (FSTL)
Mr. Edwin Yuklow	Ministry of Works
Ms. Eunae Wright	Antiquities, Monuments and Museums Corporation – Accounts
Mrs. Veronica Ferguson	Royal Bahamas Police Force – Scientific Support Services
Ms. LoAnn Johnson	Department of Environmental Health
Mr. Wellington Ferguson	The National Insurance Board – Health and Safety Management

## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of conformity assessment, the ISO Committee on conformity assessment (CASCO) is responsible for the development of International Standards and Guides.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

Draft International Standards are circulated to the national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 17043 was prepared by the ISO Committee on conformity assessment (CASCO).

It was circulated for voting to the national bodies of both ISO and IEC, and was approved by both organizations.

This first edition of ISO/IEC 17043 cancels and replaces ISO/IEC Guide 43-1:1997 and ISO/IEC Guide 43-2:1997, which have been technically revised.

## Introduction

Interlaboratory comparisons are widely used for a number of purposes and their use is increasing internationally. Typical purposes for interlaboratory comparisons include:

- a) evaluation of the performance of laboratories for specific tests or measurements and monitoring laboratories' continuing performance;
- b) identification of problems in laboratories and initiation of actions for improvement which, for example, may be related to inadequate test or measurement procedures, effectiveness of staff training and supervision, or calibration of equipment;
- c) establishment of the effectiveness and comparability of test or measurement methods;
- d) provision of additional confidence to laboratory customers;
- e) identification of interlaboratory differences;
- f) education of participating laboratories based on the outcomes of such comparisons;
- g) validation of uncertainty claims;
- h) evaluation of the performance characteristics of a method – often described as collaborative trials;
- i) assignment of values to reference materials and assessment of their suitability for use in specific test or measurement procedures; and
- j) support for statements of the equivalence of measurements of National Metrology Institutes through “key comparisons” and supplementary comparisons conducted on behalf of the International Bureau of Weights and Measurement (BIPM) and associated regional metrology organizations.

Proficiency testing involves the use of interlaboratory comparisons for the determination of laboratory performance, as listed in a) to g) above. Proficiency testing does not usually address h), i) and j) because laboratory competence is assumed in these applications, but these applications can be used to provide independent demonstrations of laboratory competence. The requirements of this International Standard can be applied to many of the technical planning and operational activities for h), i) and j).

The need for ongoing confidence in laboratory performance is not only essential for laboratories and their customers but also for other interested parties, such as regulators, laboratory accreditation bodies and other organizations that specify requirements for laboratories. ISO/IEC 17011 requires accreditation bodies to take account of laboratories' participation and performance in proficiency testing. There is a growing need for proficiency testing for other conformity assessment activities, such as inspection or product certification. Most of the requirements in this International Standard apply to those evolving areas, especially regarding management, planning and design, personnel, assuring quality, confidentiality, and other aspects, as appropriate.

This International Standard has been prepared to provide a consistent basis for all interested parties to determine the competence of organizations that provide proficiency testing. In doing so it replaces both parts of ISO/IEC Guide 43:1997. ISO/IEC Guide 43 included not only guidance on development and operation of proficiency testing and selection and use of proficiency testing by laboratory accreditation bodies, but also useful descriptions of typical types of proficiency testing. This International Standard has preserved and updated the principles for the operation of proficiency testing described in ISO/IEC Guide 43 and has retained in Annexes A to C information on typical types of proficiency testing schemes, guidance on appropriate statistical methods, selection and use of proficiency testing schemes by laboratories, accreditation bodies, regulatory bodies, and other interested parties.

# Conformity assessment — General requirements for proficiency testing

## 1 Scope

This International Standard specifies general requirements for the competence of providers of proficiency testing schemes and for the development and operation of proficiency testing schemes. These requirements are intended to be general for all types of proficiency testing schemes, and they can be used as a basis for specific technical requirements for particular fields of application.

## 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 17000:2004, *Conformity assessment — Vocabulary and general principles*

ISO/IEC Guide 99:2007, *International vocabulary of metrology — Basic and general concepts and associated terms (VIM)*

## 3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 17000:2004, ISO/IEC Guide 99:2007 and the following apply.

### 3.1

#### **assigned value**

value attributed to a particular property of a proficiency test item

### 3.2

#### **coordinator**

one or more individuals with responsibility for organizing and managing all of the activities involved in the operation of a proficiency testing scheme

### 3.3

#### **customer**

organization or individual for which a proficiency testing scheme is provided through a contractual arrangement

### 3.4

#### **interlaboratory comparison**

organization, performance and evaluation of measurements or tests on the same or similar items by two or more laboratories in accordance with predetermined conditions
